(Awarded Jan 2021 by Japan Foundation and Japan Educational Exchanges and Services)

ACTIVITIES

- **Singapore Institute of Management (University of Wollongong) Final Year Project**

  Developing a malware scanning app for the Android OS as my final year projects at SIM. It was challenging as I was using a program that I wasn't familiar with, as it was our first time developing a mobile app for the Android OS but me and my groupmates managed to overcome through self-learning on the internet and we were able to develop a malware scanner app that is workable. We used the iterative SDLC approach for this project

- **SDLC models used in Projects and Assignments**
  - Waterfall model
  - Iterative Model (Commonly used)
